## Course Description:

The aim of this one day course is to provide a basic knowledge to delegates of how and why their response and response equipment should work as a result of an oil spill incident. The course will cover the familiarisation of a Contingency Plan and the operation and deployment of Tier 1 response equipment. This familiarisation course will also provide delegates with the main principles of Sorbent materials and how the various components in their Oil Spill Kit can be used to their best advantage during an oil spill incident.

## Course Content:

1. Spill Introduction
2. Contingency Plan
3. Spill Evaluation
4. Safety Issues
5. Sorbent Materials
6. Waste Management
7. Environmental
8. Spill Management

**Maritime &  
Coastguard  
Agency**

## Additional Information:

This course is mostly classroom based with demonstrations and videos included. Practical training may be carried out in the port or onshore depending on the location.

Course can be carried out on client's premises based on a minimum number of delegates attending.
