Course Description:

This course is aimed at staff who will be required to supervise on site personnel during a spill. Staff are required to carry out site assessments for health and safety issues, and also environmental sensitivity assessments. They should also be able to formulate a work plan and establish a communications network between cleanup staff and the on-scene commander.

Course Content:

1. Spill Introduction
2. Contingency Plan
3. Oil Fate & Spill Evaluation
4. Shoreline response & SCAT
5. Safety in the response
6. Spill Containment
7. Recovery devices
8. Sorbent materials
9. Waste management
10. Environmental Issues
11. Spill Coordination & Management

**Maritime &
Coastguard
Agency**

Additional Information:

This course is both classroom and practical training. A deployment exercise will be conducted in the port area or coastline with clients or Briggs OSR equipment. Course can be carried out on client's premises based on a minimum number of delegates attending.
